EDUCATION

Georgia Institute of Technology Atlanta, GA
Bachelor of Science in Computer Science Expected Graduation Date: May 2027
Concentrations: Intelligence and Modeling and Simulation GPA: 3.68

SKILLS

- **Programing Languages:** Python, Java, C++, C, Typescript, Javascript, SQL, Bash, R, HTML, CSS
- **Operating Systems/Platforms:** Windows, Linux, MacOS, Azure, Kubernetes, Openshift, Docker, Raspberry Pi
- **Frameworks:** PyTorch, LangChain, RAG, Flask, React Native
- **Software/Packages/Tools:** NumPy, SciPy, Matplotlib, Pandas, Keras, Scikit-Learn, ChromaDB, MySQL, FAISS, Transformers, Jupyter Notebook, Git/Github, LAMMPS, Android Studio, Junit, Firebase, Ansible, VS Code, Cursor, Claude, Power BI

WORK EXPERIENCE

IBM Brookhaven, GA
Customer Success Engineer Co-op (Data & AI) August 2026 - Present

- Using python, open source frameworks, RedHat, and IBM watsonx to architect and build proof of concept and MVP (minimum viable products) builds to drive enterprise adoption and deployment of IBM's data and AI solutions.

Novelis Kennesaw, GA
Research and Development Engineer Intern June 2023 – July 2023

- Worked with a team to develop a robotic autonomous system for transporting and administering a three-point bend test on various aluminum alloy samples.
- Used python modules such as threading, OS, sys, and RPi.GPIO libraries to control step motors simultaneously using pulse width modulation (PWM) signals and to program general purpose input/output (GPIO) pins to receive and send signals between various hardware, such as limit switches, test machinery, and a UR16e robotic arm.

RESEARCH EXPERIENCE

Georgia Tech Vertically Integrated Projects Atlanta, GA
Undergraduate Researcher for the Surrogate Modeling for Urban Regeneration (SMUR) team January 2025 - May 2026

- Developed agent-based simulation software in Python that uses game theory and no-regret dynamics to simulate the demographic changes of the Atlanta Beltline.
- Used python modules such as threading, OS, requests, pandas, pickle, and matplotlib to fetch, store, cache, and visualize simulation data.

Georgia Tech Bhamla Lab Atlanta, GA
Undergraduate Researcher June 2024 – May 2025

- Worked on a research project on active polymers using LAMMPS (Large-scale Atomic/Molecular Massively Parallel Simulator) Brownian physics simulation software.
- Automated the process of collecting, organizing, and visualizing simulation data using Python data analysis packages such as NumPy, SciPy, and Matplotlib.
- Research published in the journal Physical Review Letters (PRL): https://doi.org/10.1103/ntm6-dz86

PROJECTS

Glasses Notes

- An automated AI-powered presentation note-taking app for Ray-Ban Meta smart glasses, built with Typescript, Javascript, React Native, and deployed using Expo.
- Includes features for automated audio/slide transcription and organized summarization/note-taking using Whisper and GPT.
